A 'FULLY REVAMPED' EXPERIENCE

Google unleashes AI in search

DAVEY ALBA & JULIA LOVE
May 15

SUNDAR PICHAI, CEO, ALPHABET

GOOGLE SEARCH IS GENERATIVE AI AT THE SCALE OF HUMAN CURIOSITY

WE SEE SO MUCH OPPORTUNITY AHEAD OF US FOR CREATORS, FOR DEVELOPERS, FOR STARTUPS, FOR EVERYONE

FOR NEARLY TWO years, Google has been locked in a race with OpenAI and others to bring generative artificial intelligence — which can answer complex questions in a conversational manner — to the public in a way that most consumers will actually adopt. On Tuesday, Google fired a clear shot at competitors, signaling it has no intention of losing its leading position as the world's most popular search engine.

The act of "Googling," which has been synonymous with search for the past two decades, will now become supercharged with the technology from Alphabet's powerful AI model, Gemini, the company said at its annual developer conference in Mountain View, California.

"Google search is generative AI at the scale of human curiosity," Chief executive officer Sundar Pichai said onstage in announcing the new features at the company's I/O summit.

In front of a live audience, Google unveiled what Pichai called a "fully revamped, new search experience" that will roll out to all US users this week, with the new Gemini-powered search coming to other countries "soon."

"We see so much opportunity ahead of us for creators, for developers, for startups, for everyone," Pichai said in a call with reporters ahead of the event.

The biggest single change in Googling is that some searches will now come with "AI overviews," a more narrative response that spares people the task of clicking through various links.

An AI-powered panel will appear underneath people's queries in the famously simple search bar, presenting summarized information drawn from Google search results from across the web. Google said it would also roll out an AI-organized page that groups results by theme or presents, say, a day-by-day plan for people turning to Google for specific tasks, such as putting together a meal plan for the week or finding a restaurant to celebrate an anniversary. Google said it won't trigger AI-powered overviews for certain sensitive queries, such as searches for medical information or self-harm.

Shortly after its founding in 1998, Google surpassed Yahoo! to become the clear global favorite search engine, a result of its algorithm, which was faster and more accurate than anything else at the time. Its dominance has been so unshakeable that it's the subject of a federal antitrust lawsuit.

The act of "Googling," which has been synonymous with search, will now become supercharged with the technology from Alphabet's powerful AI model, Gemini

Yet the nature of online search is fundamentally changing — and Google's rivals are increasingly moving in on its turf. The search giant has faced enormous pressure from the likes of OpenAI and Anthropic, whose AI-powered chatbots ChatGPT and Claude are easy to use and have become widely adopted — threatening Google's pole position in search and menacing its entire business model.

In a strategically timed announcement on Monday, OpenAI, which is backed by billions from Microsoft Corp., introduced a faster and cheaper AI model called GPT-4o that will power its popular chatbot. The new AI model will let people speak to ChatGPT or show it an image, and OpenAI says it can respond within milliseconds. As Google unveiled its latest products on Tuesday, it faced a tricky balancing act: showing it hasn't fallen behind OpenAI, without cannibalizing the search advertising business that remains its lifeblood.

"By showcasing its latest models and how they'll power existing products with strong consumer reach, Google is demonstrating how it can effectively differentiate itself from rivals," said Jacob Bourne, an analyst at Emarketer. "To maintain its competitive edge and satisfy investors, Google will need to focus on translating its AI innovations into profitable products and services at scale."

If last year Google showed a willingness to experiment with generative AI features in its main products and services, this is the year the company is diving right in, with fundamental and noticeable changes in its iconic platform.

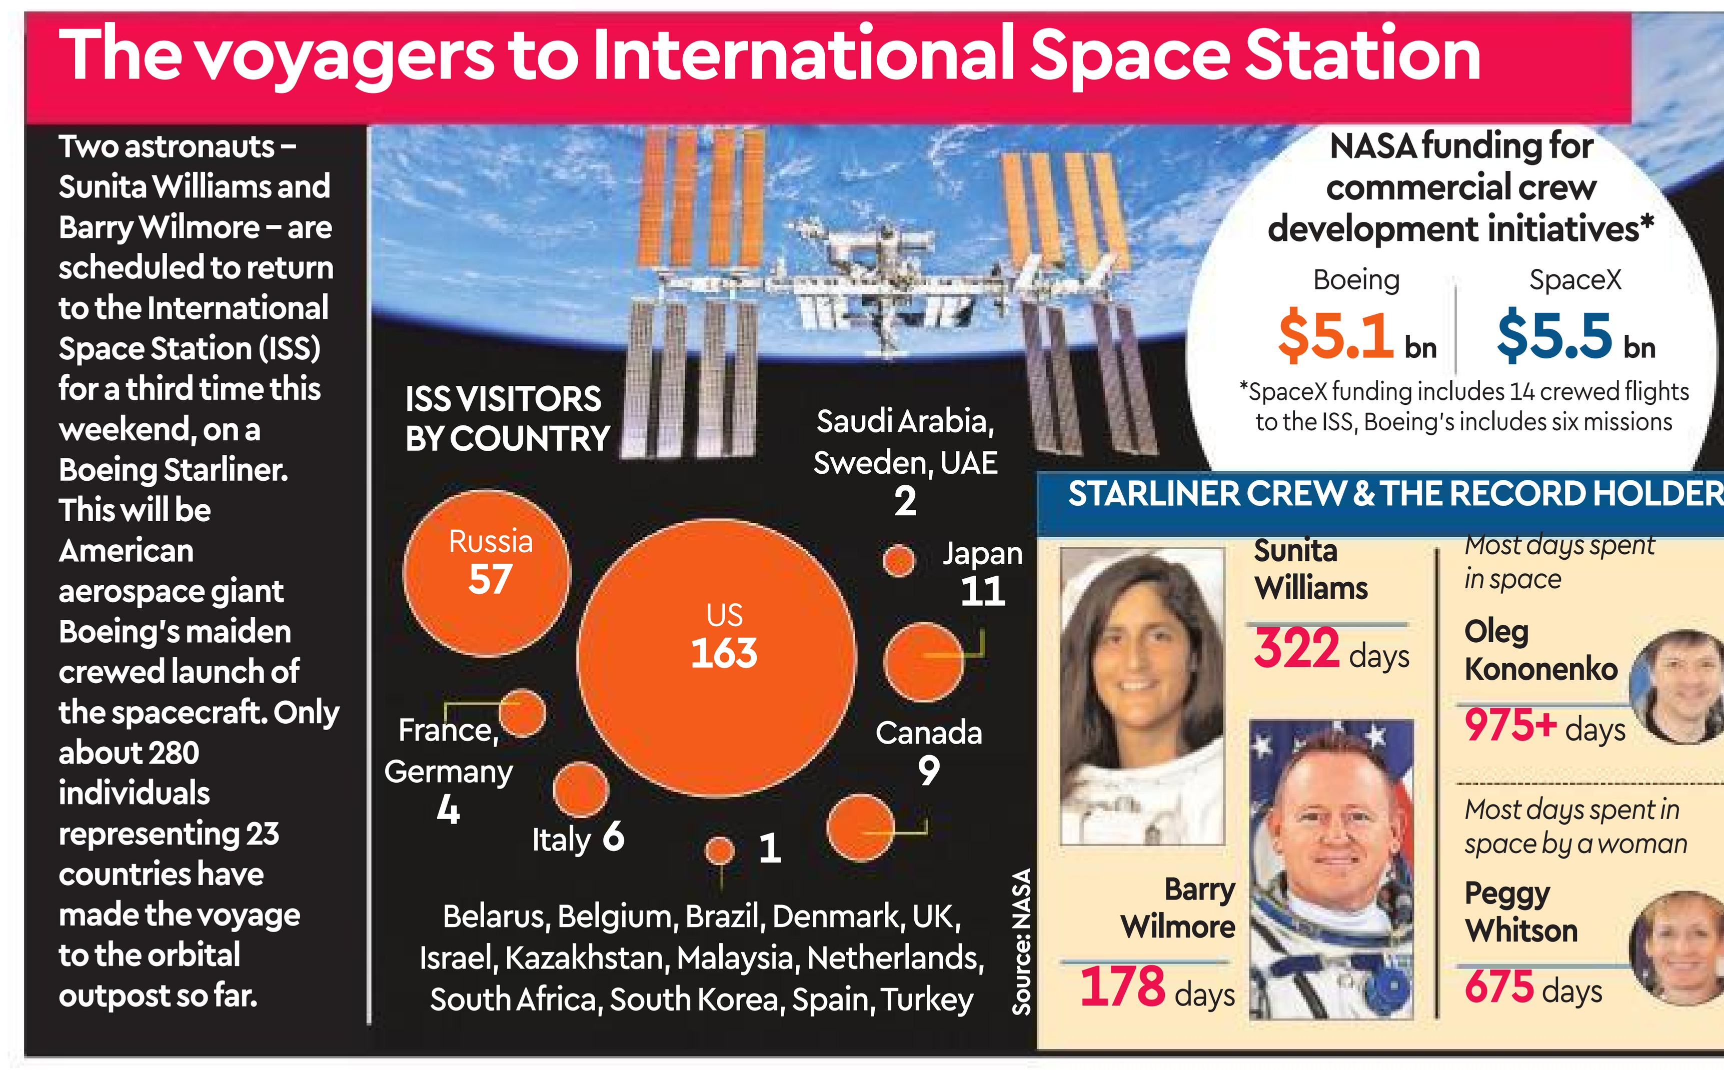
The shift poses challenges for the economics of Google's core search business, which delivered more than $175 billion in search advertising last year. Investors have noted that delivering generative AI search responses will require more computing power than producing a list of links, potentially eating into the margins of Google's hugely profitable search machine. In an interview with Bloomberg last week, Liz Reid, Google's vice president for search, said the company has made progress in bringing down the cost of generative AI search. She said the company had no plans for the AI-powered additions to be tied to a subscription, as has been reported in the media.

By bringing more generative AI to its search engine, Google hopes to reduce the time and mental load it takes for users to find the information that they are looking for, Reid said.

"Search is a very powerful tool. But there's lots of times where you have to do a lot of hard work in searching," Reid said. "How can we take that hard work out of searching for you, so you can focus on getting things done?" Reid said the new AI-powered Google search will be able to process billions of queries.

But Google must also take care not to rock the boat too much. People may click on fewer ads if the AI overviews fully address their questions. The ecosystem of news sites and other websites that rely on the search giant for traffic may also see fewer visitors because of Google's changes. Reid tried to project an air of calm for advertisers and publishers. Ads will continue to appear in dedicated slots throughout Google search results, with labeling to distinguish sponsored items from organic results, she said. The company's tests, meanwhile, have shown that generative AI searches are a jumping-off point to other websites for users, not the end of the road, she added.

In order to keep advancing in artificial intelligence, Google has also had to update its suite of AI models, and the company shared more progress on that front on Tuesday. It announced Gemini 1.5 Flash, which Google says is the fastest AI model available through its application programming interface, or API, typically used by programmers to automate high-frequency tasks like summarizing text, captioning images or video, or extracting data from tables. —**BLOOMBERG**



How the Royals took a leaf out of baseball to power their six-hitters

LALITH KALIDAS
New Delhi, May 15

SINCE THE IPL became a 10-team format two seasons ago, Rajasthan Royals have slammed 351 sixes — the third most. The game-changer here is this number; nearly 29% of RR's entire tally of sixes since 2008.

Some of Rajasthan's brightest stars immediately impressed the in-house scouts by hitting sixes during trials over the years. A young Sanju Samson's standout shot was a straight six to a back-of-the-length ball, Riyan Parag's six was over mid-wicket, Dhruv Jurel went over extra cover, Yashasvi Jaiswal's ramp shot almost went all the way.

But Rajasthan Royals kept their big-hitters up to date with the batting evolution in T20 cricket. They were quick to learn from baseball, using data and research to stay ahead of the curve.

"That one shot made us love what we saw from them. And it was inevitably a six," Zubin Bharucha, the head of high performance at Rajasthan Royals, explains. "All of them came with a certain six-hitting ability."

Sanju Samson's standout shot was a straight six to a back-of-the-length ball

Sunrisers Hyderabad have reset the batting template with record-breaking totals this season, while Rajasthan have shown glimpses of what they are capable of on a good day. In April, RR chased down 224 against Kolkata Knight Riders, the joint highest successful chase in the IPL before Punjab Kings bettered it by gunning down 262, also against KKR, 10 days later.

Bharucha said the emphasis on hitting one extra boundary than the opposition was popularised about six years ago.

"That's when we got on the bandwagon about what's happening in baseball. Why are they hitting the ball further? So a lot of the protocols that we adopted came partly from baseball and partly from our understanding of how you use the mechanics of the swing to hit the ball further. The bat swing is related to how your eye picks up the ball and the time from when the ball is released to when you play. A 15-year-old Sanju Samson had the same swing as he does today. What we have changed is the width of that swing — how far it is from the body, the way the elbows are set up, baseball stuff, and all that," Bharucha elaborated.

To pick up elements from baseball, Bharucha even had all-rounder Ravichandran Ashwin travel to the USA. Hitting the ball upwards instead of flat was a key takeaway.

"We took Ashwin to Seattle to explain baseball mechanics, both in batting and bowling, with a company called Driveline Baseball. They are the guys who created a revolution in baseball where they were able to increase the home runs by 50 per cent. What their research said was that in baseball, they were always hitting it flat. These guys used high technology literally in a garage and proved that it was wrong, and you hit upwards on the ball."

RR has encouraged their batsmen to experiment with heavy bats, light bats and also have been innovative with batting drills.

For instance, Bharucha says their lead batters also work on batting on the outfield to improve their six-hitting against spin. "It's much tougher to hit the ball on the outfield. So we have bowlers bowling from 10 feet, 15 feet, etc... into the rough, and all these guys, Sanju, Riyan, Yash (Jaiswal), and Dhruv, are all trying to hit sixes from there. A lot of these mechanisms were introduced to these guys over the last few years, and you are seeing the difference now."

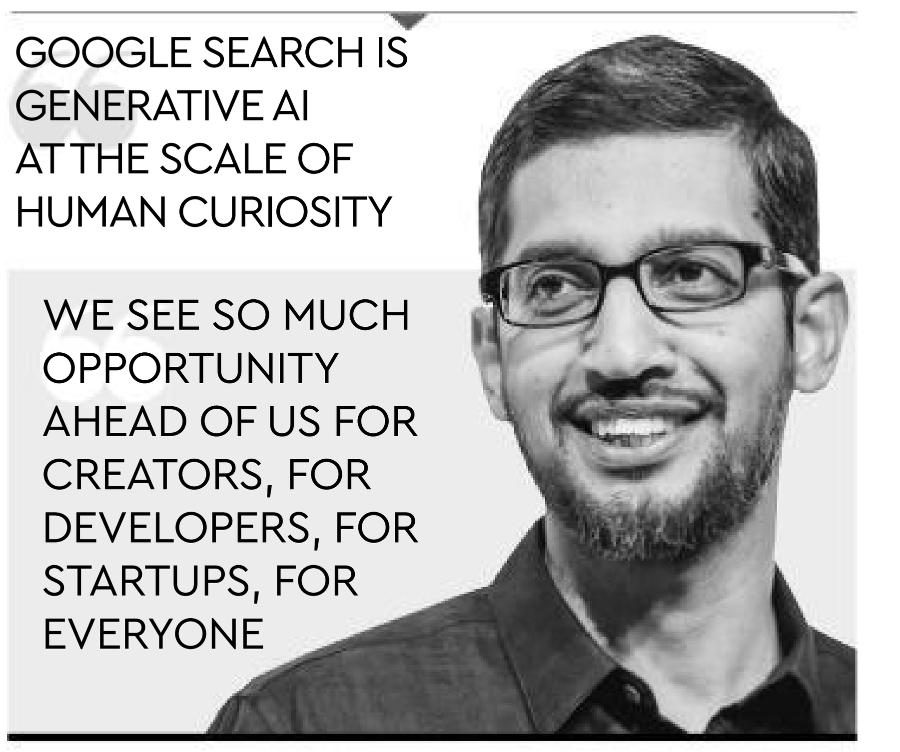
A 'FULLY REVAMPED' EXPERIENCE

Google unleashes AI in search

DAVEY ALBA & JULIA LOVE
May 15

SUNDAR PICHAI, CEO, ALPHABET



FOR NEARLY TWO years, Google has been locked in a race with OpenAI and others to bring generative artificial intelligence — which can answer complex questions in a conversational manner — to the public in a way that most consumers will actually adopt. On Tuesday, Google fired a clear shot at competitors, signaling it has no intention of losing its leading position as the world's most popular search engine.

The act of "Googling," which has been synonymous with search for the past two decades, will now become supercharged with the technology from Alphabet's powerful AI model, Gemini, the company said at its annual developer conference in Mountain View, California.

"Google search is generative AI at the scale of human curiosity," Chief executive officer Sundar Pichai said onstage in announcing the new features at the company's I/O summit.

In front of a live audience, Google unveiled what Pichai called a "fully revamped, new search experience" that will roll out to all US users this week, with the new Gemini-powered search coming to other countries "soon."

"We see so much opportunity ahead of us for creators, for developers, for startups, for everyone," Pichai said in a call with reporters ahead of the event.

The biggest single change in Googling is that some searches will now come with "AI overviews," a more narrative response that spares people the task of clicking through various links.

An AI-powered panel will appear underneath people's queries in the famously simple search bar, presenting summarized information drawn from Google search results from across the web. Google said it would also roll out an AI-organized page that groups results by theme or presents, say, a day-by-day plan for people turning to Google for specific tasks, such as putting together a meal plan for the week or finding a restaurant to celebrate an anniversary. Google said it won't trigger AI-powered overviews for certain sensitive queries, such as searches for medical information or self-harm.

Shortly after its founding in 1998, Google surpassed Yahoo! to become the clear global favorite search engine, a result of its algorithm, which was faster and more accurate than anything else at the time. Its dominance has been so unshakeable that it's the subject of a federal antitrust lawsuit.

Yet the nature of online search is fundamentally changing — and Google's rivals are increasingly moving in on its turf. The search giant has faced enormous pressure from the likes of OpenAI and Anthropic, whose AI-powered chatbots ChatGPT and Claude are easy to use and have become widely adopted — threatening Google's pole position in search and menacing its entire business model.

In a strategically timed announcement on Monday, OpenAI, which is backed by billions from Microsoft Corp., introduced a faster and cheaper AI model called GPT-4o that will power its popular chatbot. The new AI model will let people speak to ChatGPT or show it an image, and OpenAI says it can respond within milliseconds. As Google unveiled its latest products on Tuesday, it faced a tricky balancing act: showing it hasn't fallen behind OpenAI, without cannibalizing the search advertising business that remains its lifeblood.

The act of "Googling," which has been synonymous with search, will now become supercharged with the technology from Alphabet's powerful AI model, Gemini

"By showcasing its latest models and how they'll power existing products with strong consumer reach, Google is demonstrating how it can effectively differentiate itself from rivals," said Jacob Bourne, an analyst at Emarketer. "To maintain its competitive edge and satisfy investors, Google will need to focus on translating its AI innovations into profitable products and services at scale."

If last year Google showed a willingness to experiment with generative AI features in its main products and services, this is the year the company is diving right in, with fundamental and noticeable changes in its iconic platform.

The shift poses challenges for the economics of Google's core search business, which delivered more than $175 billion in search advertising last year. Investors have noted that delivering generative AI search responses will require more computing power than producing a list of links, potentially eating into the margins of Google's hugely profitable search machine. In an interview with Bloomberg last week, Liz Reid, Google's vice president for search, said the company has made progress in bringing down the cost of generative AI search. She said the company had no plans for the AI-powered additions to be tied to a subscription, as has been reported in the media.

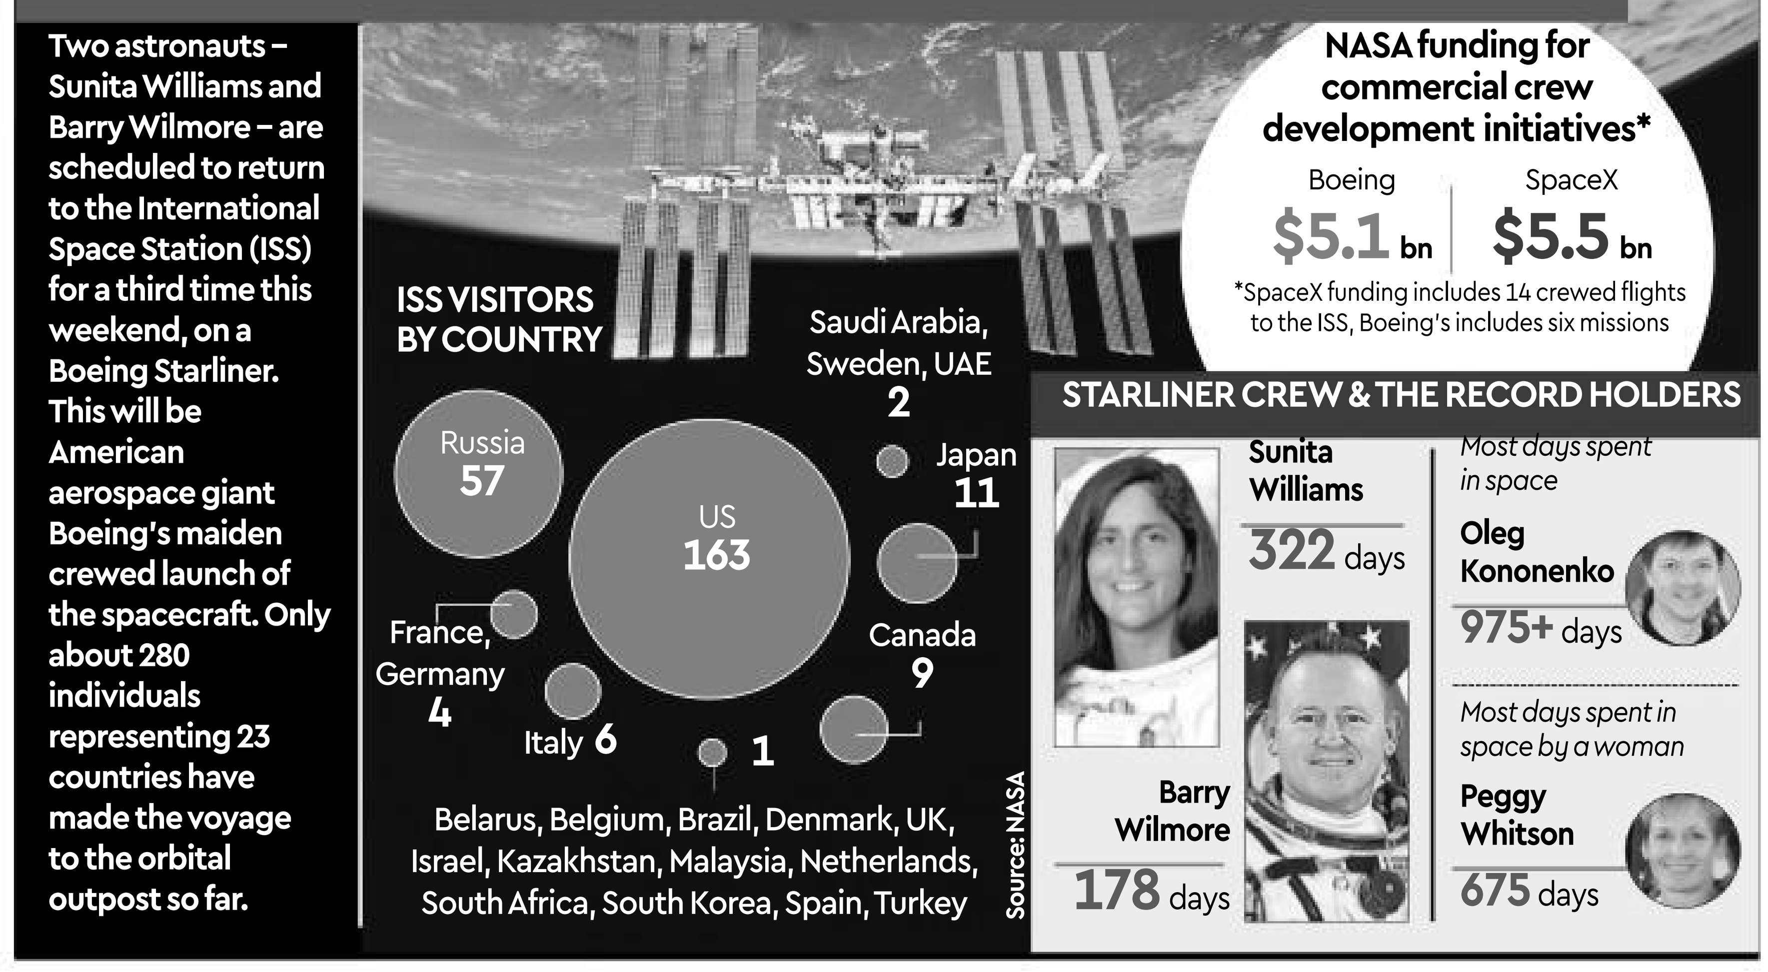
By bringing more generative AI to its search engine, Google hopes to reduce the time and mental load it takes for users to find the information that they are looking for, Reid said.

"Search is a very powerful tool. But there's lots of times where you have to do a lot of hard work in searching," Reid said. "How can we take that hard work out of searching for you, so you can focus on getting things done?" Reid said the new AI-powered Google search will be able to process billions of queries.

But Google must also take care not to rock the boat too much. People may click on fewer ads if the AI overviews fully address their questions. The ecosystem of news sites and other websites that rely on the search giant for traffic may also see fewer visitors because of Google's changes. Reid tried to project an air of calm for advertisers and publishers. Ads will continue to appear in dedicated slots throughout Google search results, with labeling to distinguish sponsored items from organic results, she said. The company's tests, meanwhile, have shown that generative AI searches are a jumping-off point to other websites for users, not the end of the road, she added.

In order to keep advancing in artificial intelligence, Google has also had to update its suite of AI models, and the company shared more progress on that front on Tuesday. It announced Gemini 1.5 Flash, which Google says is the fastest AI model available through its application programming interface, or API, typically used by programmers to automate high-frequency tasks like summarizing text, captioning images or video, or extracting data from tables. —**BLOOMBERG**

The voyagers to International Space Station



How the Royals took a leaf out of baseball to power their six-hitters

LALITH KALIDAS
New Delhi, May 15

Sanju Samson's standout shot was a straight six to a back-of-the-length ball

SINCE THE IPL became a 10-team format two seasons ago, Rajasthan Royals have slammed 351 sixes — the third most. The game-changer here is this number; nearly 29% of RR's entire tally of sixes since 2008.

Some of Rajasthan's brightest stars immediately impressed the in-house scouts by hitting sixes during trials over the years. A young Sanju Samson's standout shot was a straight six to a back-of-the-length ball, Riyan Parag's six was over mid-wicket, Dhruv Jurel went over extra cover, Yashasvi Jaiswal's ramp shot almost went all the way.

But Rajasthan Royals kept their big-hitters up to date with the batting evolution in T20 cricket. They were quick to learn from baseball, using data and research to stay ahead of the curve.

"That one shot made us love what we saw from them. And it was inevitably a six," Zubin Bharucha, the head of high performance at Rajasthan Royals, explains. "All of them came with a certain six-hitting ability."

Sunrisers Hyderabad have reset the batting template with record-breaking totals this season, while Rajasthan have shown glimpses of what they are capable of on a good day. In April, RR chased down 224 against Kolkata Knight Riders, the joint highest successful chase in the IPL before Punjab Kings bettered it by gunning down 262, also against KKR, 10 days later.

Bharucha said the emphasis on hitting one extra boundary than the opposition was popularised about six years ago.

"That's when we got on the bandwagon about what's happening in baseball. Why are they hitting the ball further? So a lot of the protocols that we adopted came partly from baseball and partly from our understanding of how you use the mechanics of the swing to hit the ball further. The bat swing is related to how your eye picks up the ball and the time from when the ball is released to when you play. A 15-year-old Sanju Samson had the same swing as he does today. What we have changed is the width of that swing — how far it is from the body, the way the elbows are set up, baseball stuff, and all that," Bharucha elaborated.

To pick up elements from baseball, Bharucha even had all-rounder Ravichandran Ashwin travel to the USA. Hitting the ball upwards instead of flat was a key takeaway.

"We took Ashwin to Seattle to explain baseball mechanics, both in batting and bowling, with a company called Driveline Baseball. They are the guys who created a revolution in baseball where they were able to increase the home runs by 50 per cent. What their research said was that in baseball, they were always hitting it flat. These guys used high technology literally in a garage and proved that it was wrong, and you hit upwards on the ball."

RR has encouraged their batsmen to experiment with heavy bats, light bats and also have been innovative with batting drills.

For instance, Bharucha says their lead batters also work on batting on the outfield to improve their six-hitting against spin. "It's much tougher to hit the ball on the outfield. So we have bowlers bowling from 10 feet, 15 feet, etc... into the rough, and all these guys, Sanju, Riyan, Yash (Jaiswal), and Dhruv, are all trying to hit sixes from there. A lot of these mechanisms were introduced to these guys over the last few years, and you are seeing the difference now."

I, ROHINI K LALVANI alias ROHINI LALWANI alias ROHINI KARTARSINGH LALVANI (PAN AAPPL4946B), holding 100 shares of Face Value Rs.10/- in Bosch Limited (Formerly: Motor Industries Company Limited) having its registered office at Hosur Road, Adugodi, Bangalore-560030 in Folio L00784 bearing Share Certificate Number S0001503 with Distinctive Numbers from 31642621-31642720.
