# International Asteroid Day 'Celestial wanderers safeguard planet's future'

Pooja Sathesh

Every day, millions of rocky remnants from the dawn of our Solar System drift silently through the void of space. While the idea of these asteroids racing past Earth might evoke images of cinematic catastrophe, scientists are quick to reassure us that there is little cause for alarm. Instead of fearing these celestial wanderers, humanity's greatest asset lies in understanding them—a pursuit that may well be key to safeguarding our planet's future.

This is the core message behind International Asteroid Day, observed annually on June 30. The day is dedicated to elevating public awareness about asteroids, fostering scientific research, and galvanising international collaboration on planetary defence strategies. Its date is poignantly chosen to commemorate the Tunguska event of 1908, when a massive asteroid or comet detonated in the atmosphere above the desolate Siberian forest.

The resulting airburst flattened over 2,000 square kilometres of woodland, levelling millions of trees. As the explosion occurred over an uninhabited region, there were no human casualties; yet, it serves as a stark historical reminder that Earth resides within a dynamic and sometimes perilous cosmic neighbourhood. Had that blast occurred over a major metropolis, the devastation would have been immeasurable.

Despite their destructive potential, asteroids are far more than just dangerous projectiles. To the scientific community, they are invaluable "time capsules," holding pristine clues to the Solar System's formation roughly 4.6 billion years ago. Unlike planets that have undergone significant geological evolution, many asteroids have remained largely unchanged.

By scrutinising their composition, astronomers gain unprecedented insights into the earliest chapters of planetary evolution. Moreover, prevailing theories suggest that these ancient rocks may have delivered water and essential organic molecules to the nascent Earth, essentially seeding the ingredients necessary for the emergence of life. Looking ahead, they may also become crucial resource hubs for future spacefaring endeavours, rich in metals like iron, nickel, and platinum that could support long-duration missions and nascent space-based industries.

The vast majority of these bodies reside safely in the asteroid belt between Mars and Jupiter, while others, like

the Trojan asteroids, travel alongside Jupiter. Only a small fraction are classified as Near-Earth Objects (NEOs), whose orbits bring them relatively close to our planet. However, "near-earth" does not signify imminent danger; these objects are continuously monitored by a global network of astronomers, much like meteorologists tracking developing weather systems.

Still, history proves that impacts can have catastrophic consequences. The Chicxulub impactor, which struck the Yucatán Peninsula 66 million years ago, triggered a global winter that led to the extinction of the dinosaurs. More recently, in 2013, a much smaller asteroid exploded over Chelyabinsk, Russia; though it never reached the ground, the shockwave damaged thousands of buildings and injured over 1,500 people.

Today, however, humanity possesses a crucial advantage over our prehistoric predecessors: advanced scientific capability. In 2022, NASA's Double Asteroid Redirection Test (DART) mission proved that we can deliberately alter an asteroid's trajectory by slamming a spacecraft into it, successfully changing the orbit of the harmless moonlet Dimorphos. This was a watershed moment for planetary defence. Experts now affirm that asteroid impacts are among the few natural disasters that can be prevented, provided we detect dangerous objects early enough.

This effort is profoundly international. Space agencies like NASA, the European Space Agency (ESA), and the Indian Space Research Organisation (ISRO) collaborate to detect and track NEOs. India is bolstering its capabilities through NETRA (Network for Space Object Tracking and Analysis), while also expressing keen interest in the international study of the asteroid Apophis.

Once considered a potential threat, Apophis has now been ruled out as a risk for 2029.

Instead, on April 14 of that year, the 335-metre-wide asteroid will make an exceptionally close, safe fly-by, passing within 38,000 kilometres of Earth and becoming visible to millions across the Eastern Hemisphere without a telescope.

Officially recognised by the UN in 2016, International Asteroid Day encourages governments and the public to engage in this vital dialogue. This year's global events include exhibitions and educational programmes.

In India, the Jawaharlal Nehru Planetarium in Bengaluru is observing the day with walk-in quizzes, documentary screenings after every planetarium show, poster exhibitions and interactive sessions that invite visitors to explore the fascinating world of asteroids. The celebrations will continue on July 4, when Dr. B. R. Guruprasad, Director of the planetarium, will deliver a free illustrated lecture titled "Lucy Mission to Trojan Asteroids: An Exciting Endeavour to Understand Solar System Evolution" at the U. R. Rao Bhavana. The talk will explain how NASA's Lucy spacecraft is studying Trojan asteroids ancient celestial relics that may unlock some of the greatest mysteries surrounding the formation of our Solar System.

By looking to the skies not with fear, but with curiosity and collaborative resolve, we honour the legacy of the past. The dinosaurs had no warning; thanks to science, we have the foresight to detect threats and the ingenuity to change our fate.

Ultimately, Asteroid Day reminds us that space science is for everyone: it belongs in classrooms, museums, and public discourse.

# Ayan Banerjee's 7,000 km walk promotes sustainable living

Chennai June 30: A 24-year-old environmental activist, Ayan Banerjee, is on a remarkable 7,000-km padayatra across India to promote sustainable living, responsible resource use, and compassion towards nature and animals.

Having already covered more than 2,800 km on foot across three States, Ayan has been conducting awareness sessions at schools, NGOs, blind schools, and women social welfare organisations. As part of his campaign, he distributes organic vegetable seeds to encourage home gardening and eco-friendly lifestyles. So far, he has distributed over 2,500 organic vegetable seeds during his journey.

During his two-day visit to Chennai, Ayan reached nearly 300 students through awareness programmes conducted at four NGOs and two schools, distributing close to 200 organic vegetable seeds.

On June 19, he visited The ALT School and The Suyam Trust,

where he interacted with children about environmental conservation and simple sustainable practices that can be adopted in daily life. At Suyam Trust, an organisation working to rehabilitate children living on the streets through education and social support, Ayan addressed around 50 children and distributed 30 seeds. Together, the two visits saw the distribution of 90 seeds in a single day.

The following day, Ayan conducted a 40-minute interactive session with students of Class 6A at Maharishi Vidya Mandir Senior Secondary School. The session witnessed enthusiastic participation

from students, who raised several questions on climate change, conservation, and sustainable living. In less than an hour, Ayan personally distributed more than 100 organic vegetable seeds to the students.

Ayan's ongoing nationwide padayatra aims to encourage people, especially young students, to adopt environmentally responsible habits and become active participants in protecting the planet. His journey continues as he heads towards the next phase of his campaign, carrying the message of sustainability across India.

# Pristine Logistics files (DRHP), seeks SEBI nod for IPO

Mumbai, June, 30: Pristine Logistics & Infraprojects Limited has filed its draft red herring prospectus (DRHP) with the Securities and Exchange Board of India (Sebi) under the pre-filing route, according to a public notice issued by the company, marking a significant step towards a potential initial public offering (IPO).

Founded in 2008, Pristine Logistics is a rail-focused multimodal logistics platform providing integrated logistics infrastructure and services for containerised and non-containerised cargo. The company's operations are centred on long-haul rail transportation, complemented by road-based first- and last-mile connectivity and strategically located logistics terminals across domestic and export-import (EXIM) corridors. The company is led by promoters Amit Kumar, Durgesh Govil, Rajnish Kumar and Sanjay Mawar, who collectively bring decades of experience across Indian Railways, CONCOR, rail infrastructure development, logistics and legal services. Their expertise has been instrumental in building Pristine's integrated multimodal logistics platform. It has been one of India's fastest-growing rail-focused multimodal logistics players in

terms of revenue from operations and EBITDA CAGR between FY2023 and FY2025 among key industry peers. During this period, it expanded its operational terminal network from eight to twelve terminals, while containerised cargo volumes increased from 402,049 TEUs to 506,447 TEUs and non-containerised cargo volumes rose from 1.92 million metric tonnes to 2.51 million metric tonnes.

The company is further expanding its logistics infrastructure with three upcoming terminals at Bhurkunda (Jharkhand), Haldia (West Bengal) and

Bengaluru (Karnataka). The Bhurkunda terminal will handle containerised cargo and bulk commodities such as coal and iron ore, while the Haldia facility marks Pristine's entry into port-based liquid cargo infrastructure for

edible oils, chemicals and other liquid cargo. The Bengaluru project, spread across approximately 67 acres, is being developed as a rail-linked inland container depot (ICD) near key industrial and warehousing hubs.
